Ventilation system and its varieties

Clean and fresh air is the pledge of health. It is necessary that it surrounds a person not only on the street in the city of Wheeling, but also at home or at work. With this task the ventilation system will cope. Only the classification of ventilation systems the varieties there are several factors. Supply and exhaust systems are the first, they are called the principle of operation. It can be of supply, exhaust and combined type. In the first case, the ventilation system carries out air influx of fresh and purified air from the street, which displaces pulsed from the room through door and window openings. The principle of operation of the exhaust system is understandable to many: air is formed in kitchen exhaust systems, without which no apartment or cottage can do. Air is sucked through the hood and ventilation for combined type provides for supply and exhaust ventilation. With her help, polluted air is sucked from the room, passing through complete purification. However, the best variant of ventilation is combined, which connects the supply and exhaust systems. Thanks to it, the processes of outflow of polluted and influx of fresh air are synchronized.
